

Discovery Driven Value Creation

British Columbia Targets Redefined

Forward Looking Statement

Investors are cautioned that, except for statements of historical fact certain information contained in this document includes “forward-looking information”, with respect to performance expectation for Origen. Such forward-looking statements or information, including but not limited to those with respect to its exploration projects, including the acquisition, prices, metallurgical results and resource estimates, involve known and unknown risks, uncertainties, and other factors which may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements or information.

Forward-looking statements include without limitation, statements regarding the company’s plans, goal or objectives and future exploration results, development programs, capital and operating costs, potential mineralization, resources and reserves, and future plans of Origen Resources Inc.. Forward looking statements can generally be identified by the use of forward-looking terminology such as “may”, “will”, “expect”, “intend”, “estimate”, “anticipate”, “believe”, or “continue” or the negative thereof or variations thereon or similar terminology. There can be no assurance that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Important factors that could cause results to differ materially from expectations include risks associated with mineral exploration generally and pre-development stage projects in particular.

Regulatory bodies have not reviewed and do not accept responsibility for the adequacy or accuracy of this presentation. Readers should verify any & all claims and do their due diligence before investing in any securities mentioned. Investing in securities is speculative and carries a high degree of risk.

This presentation contains statistical and technical data that were obtained from government or other industry publications or publicly filed documents prepared by other reporting issuers. Such reports generally indicate that they have obtained their information from sources believed to be reliable, but do not guarantee the accuracy and completeness of their information. While Origen believes the data extracted, or derived from the aforementioned sources to be reliable, market and industry data is subject to variations and cannot be verified due to limits on the availability and reliability of underlying data inputs, the nature of the data collection process and certain limitations and uncertainties inherent in any market as well as the inexact nature of geologic sciences.

The scientific and technical disclosure in this presentation has been supervised and approved by J. Harrop, P. Geo., a Qualified Person as defined under NI 43-101.

Company Snapshot

GOLDEN TRIANGLE

The Company has signed an LOI to acquire a dominant land package in the renowned Golden Triangle of BC

DIVERSIFIED EXPLORER

Large portfolio of quality precious and base metal projects.

PROJECT GENERATOR

Engaged in on-going project generation and actively partnering with other explorers to advance non-core assets.

BRITISH COLUMBIA

All of the Company's assets are located in the Golden Triangle and southern portion of British Columbia.

ONLY 22 MILLION SHARES

Attractive share structure with only 22 million shares Outstanding (25 million fully diluted).

Share Structure and Management

Share Structure (as of July 1, 2020)

Shares Outstanding:	21,910,825
Options: \$0.15 Exercise Price	1,800,000
Warrants: \$0.22 Exercise Price	
Expiring November 27, 2020	267,625
Expiring December 20, 2020	104,750
Expiring March 31, 2022	<u>1,113,867</u>
Fully Diluted	25,197,067

Projects

Golden Triangle

LGM

- 100% interest in 26,771 hectares (ha) bordering Evergold Corp.'s Snoball project.

Wishbone

- Option to earn a 100% interest in 3,971 ha bordering Teck/Newmont's Galore Creek development project.

Southern BC

Arlington

- 100% interest in 649 ha historically mined high-grade precious and base metal project located 17 km north of Beaverdell.

Broken Handle

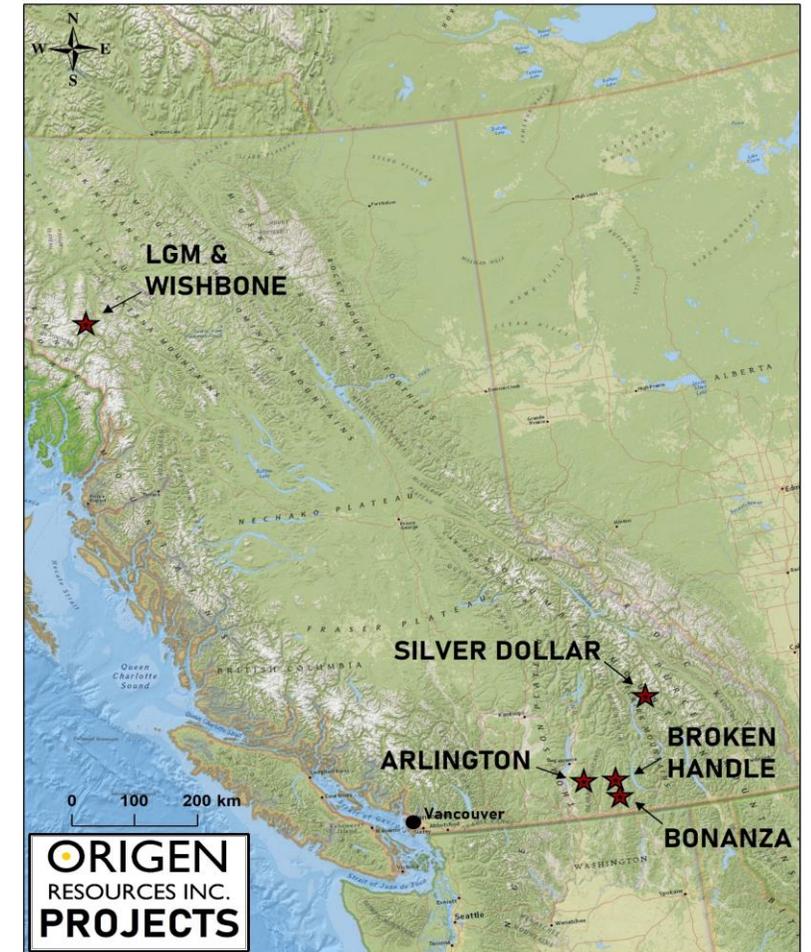

- 100% interest in 2,098 ha historically mined high-grade precious and base metal project located 50 km north of Grand Forks.

Bonanza Mountain

- 100% interest in 1,604 ha historically mined high-grade precious and base metal project located 20 km north of Grand Forks.

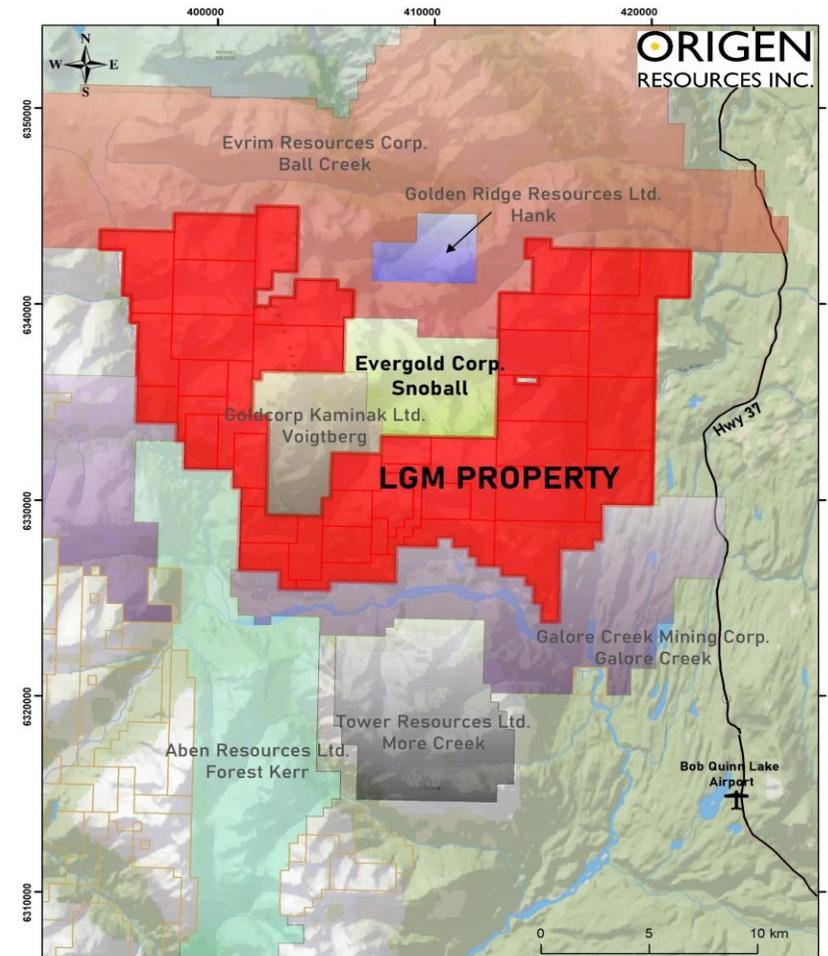

Silver Dollar

- 100% interest in 3,345 ha previously mined high-grade precious and base metal project located 45 km southeast of Revelstoke.

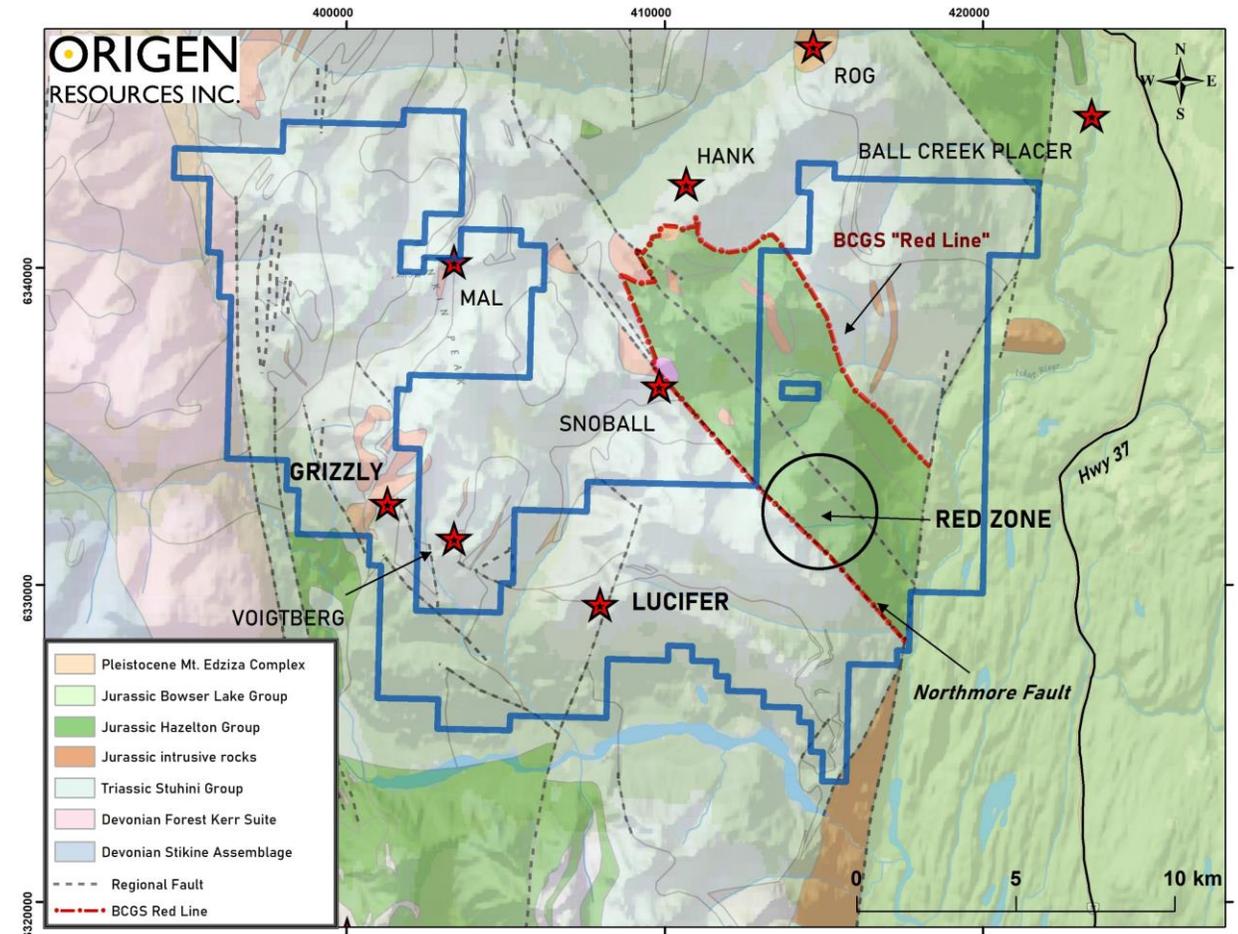

LGM Project

- 42 contiguous tenures totaling 26,771 ha.
- Borders Evergold Corp.'s Snoball project on its east and west boundaries, the Galore Creek Access Road to the south, and is in close proximity to Hwy 37.
- Mineral development, hydro and forestry work continue to reduce exploration costs with in the Golden Triangle.
- Sporadic exploration work has occurred since the 1970's on the Property resulting in the discovery of many prospective targets that show mineralogical and geological similarity to important nearby deposits and discoveries.
- B.C. Geological Survey's "Red Line," interpreted to be spatially significant to most major gold and copper deposits in the Golden Triangle transects the LGM property.

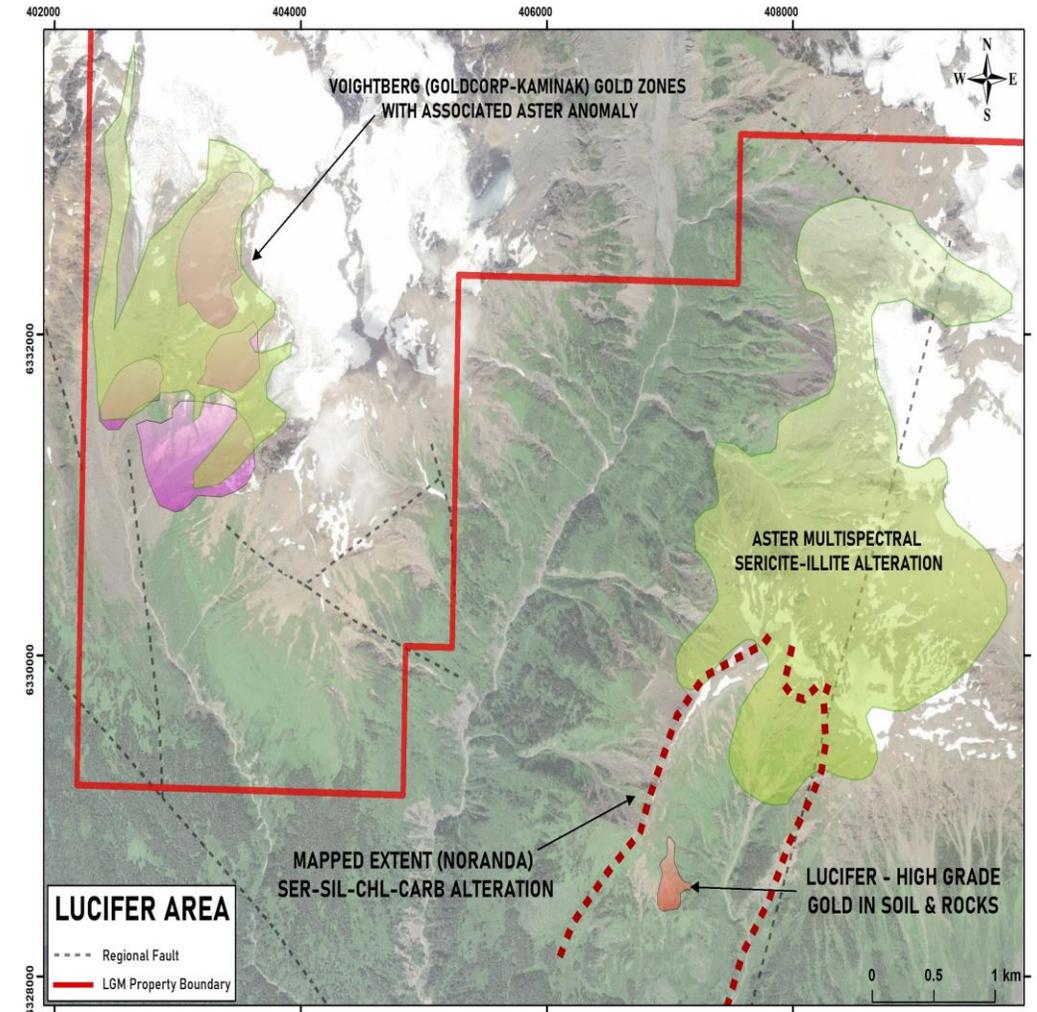

LGM Project – Red Zone

- The Red Zone was identified as a highly prospective area as it bears geological and structural similarities to mineralization on the adjacent Snoball Property.
- Recent satellite imagery shows glacial retreat and distinct newly uncovered gossans located within Hazelton Group rocks and along the Northmore Fault that transects the Red Zone.
- Newly exposed gossans have not seen any recorded exploration work.
- The Red Zone is a top exploration priority for Origen in 2020 due to the presence of the Northmore Fault newly exposed gossans along the Stuhini/Hazelton contact.

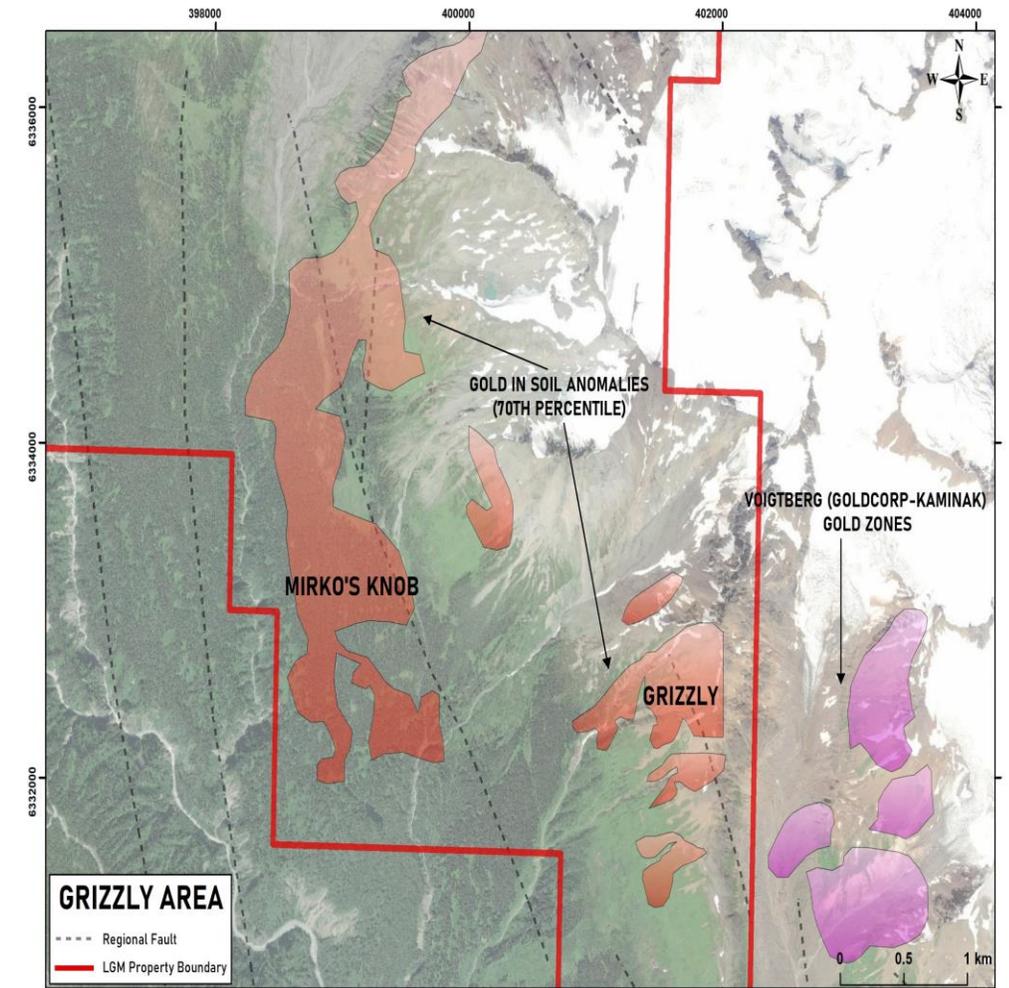

LGM Property – Lucifer Target

- The Lucifer showing consists of a 300 m x 300 m gold-in-soil anomaly.
- Numerous rock grab samples* from the anomaly area assayed greater than 1 g/t Au.
- The showing is on the SW nose of a long NE-trending ridge that displays silica-sericite-carbonate-pyrite alteration over an area of 2.5 km x 1 km.
- Maiden drill program was completed by a previous operator in 2018 and consisted of three shallow drill holes that returned anomalous gold intercepts.
 - Source of the gold-in-soil anomaly has yet to be identified.

LGM Property – Grizzly Zone

- Exploration has sporadically occurred on the Grizzly and Mirko targets since the 1970's with the most recent completed by Rimfire Minerals and Inmet Mining in 2008.
- The Grizzly prospect is a Cu-Au porphyry target defined by a 1200 m x 500 m Cu-Au soil anomaly.
- The Mirko's Knob prospect is a 800 m x 1,000 m Cu-Mo-Au soil anomaly.
- The first ever drilling at the Grizzly and Mirko prospect took place in 2008 and returned anomalous results of lower grade than seen in surface sampling.
 - Initial data review and interpretation by Origen's technical team suggests that the source of the Grizzly soil anomaly may lie further upslope from the area of 2008 drilling and further to the north in the case of the Mirko prospect.

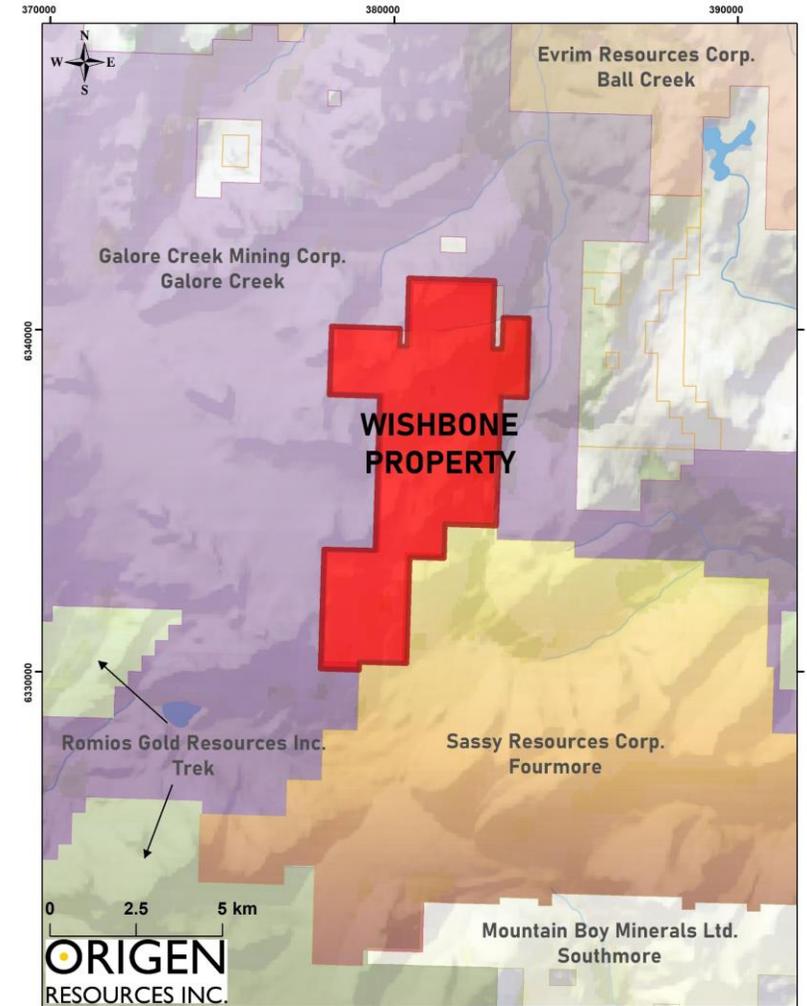

Wishbone Property

- Option to acquire 100% interest in 10 mineral tenures covering 3,971 ha.
- Contiguous to Teck/Newmont's Galore Creek copper gold mineral development project which is one of the world's largest undeveloped copper-gold-silver deposits.¹
- Contains a series of gold and silver quartz-carbonate veins and breccias over the 12 km length of the claims.

(1) Referenced nearby historic resources, deposits and mines provide geologic context for the Project, but are not necessarily indicative that the Project hosts similar potential, size or grades of mineralization.

Southern BC Projects

Arlington

- Hosts numerous structurally controlled polymetallic Ag-Cu-Pb-Zn +/- Au veins.
- Recent work includes a robust property-wide geochemical, mapping, prospecting and mag-vlf survey.
- Results indicate the polymetallic mineral occurrences have the potential for subsurface continuity between the showings.

Bonanza Mountain

- Currently optioned to Tearlach Resources Ltd. whereby Tearlach can acquire a 75% interest in the Property.
- 2019 field program highlights:
 - Copper-zinc-lead-silver skarn mineralization, with one grab sample grading 2.44 % Cu, 4.41 % Zn, 0.47 % Pb and 53 g/t Ag;
 - Silver-lead-zinc fault breccia mineralization, with one grab sample grading 266 g/t Ag, 3.14 % Pb and 5.31 % Zn;
 - Gold-silver epithermal quartz-vein-hosted mineralization, with one grab sample grading 19.7 g/t Au and 28 g/t Ag

(1) The grab samples mentioned above are solely designed to show the presence or absence of mineralization. Grab samples are by definition selective, and not intended to provide nor should be construed as a representative indication of grade or mineralization at the Project.

(2) Camp refers to a colony of miners settled in proximity to a mine, or series of mines or workings

Broken Handle

- High-grade gold-silver project encompassing the historic Morrell Camp².
- 3 km north of the Franklin Camp² that produced greater than 1.39M oz. Ag and 55,500 oz. Au over a 76 year period (Union Minfile 082ENE003 Production Detail Report).

Silver Dollar

- Covers 10km of 40km long Camborne fault System that is host to over 85 mineral deposits and showings.
- Several style of mineralization are present from gold-bearing iron sulphides in the north to silver-rich galena and sphalerite in the south.
- Currently optioned to Mariner Resources Corp. whereby Mariner can acquire a 75% interest in the Property.
